AB Title compds. I [R1 = (un)substituted alkyl with hydroxy, alkoxycarbonyl, etc.; R2, R4 = H, alkyl, alkoxy; R3 = (un)substituted alkoxy with halo, etc., further details on R3; A = benzene, pyridine, thiophene ring; B = single bond, etc.; Z = counter anion] were prepared For example, exposure of compound II Na salt to tetrafluoroboric acid in ethanol afforded compound III. In H+/K+ ATPase inhibition assays, the IC50 value of compound III was 1.28 μ M. Compds. I are claimed useful as therapeutic agent for digestive ulcers.

AB The title compds. I [A1 represents (O)n; R1 and R2 represent each optionally substituted alkyl, etc.; R3, R5 and R6 represent each alkyl, alkoxy, hydrogen, etc.; R4 represents optionally substituted alkyl, etc.; A represents a benzene ring, etc.; B represents oxygen, etc.; and n is an integer of from 0 to 2] are prepared Because of showing little individual

Ι

differences in the therapeutic effect based on individual differences in the CYP2C19 activity, the compds. I can exert an appropriate therapeutic effect on any patient in a single administration dose. Moreover, these compds. carry little risk of the interaction or carcinogenesis induced by CYP1A family members. Thus, they are useful as safe remedies for digestive ulcer. In an vitro test for proton pump inhibiting effects, compds. of this invention showed IC50 values of 0.87 µmol/L to 5.85 µmol/L.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

ΔR Provided are 1-N-aminobenzimidazole derivatives represented by the following formula (I): ##STR1## wherein R.sup.1 and R.sup.2 each represents a substituted or unsubstituted alkyl group or the like, R.sup.3, R.sup.5 and R.sup.6 each represents an alkyl group, alkoxy group, hydrogen atom or the like, R.sup.4 represents a substituted or unsubstituted alkyl group or the like, A represents a benzene ring or the like, B represents a hydrogen atom or the like, an n stands for an integer of from 0 to 2, or salts thereof; and medicines containing them. The compounds (I) according to the present invention do not bring about much individual differences in therapeutic effects despite the existence of individual differences in the CYP2C19 activity. At the same dose, they can hence bring about appropriate therapeutic effects for all patients. In addition, they are low in the risk of induction of an interaction or a cancer caused by induction of the CYP1A family. Accordingly, they are useful as peptic ulcer therapeutic agents which are safe and surely bring about therapeutic effects.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.
